

Gabriel Saúl Robles García

Software Developer · Future Industrial Engineer

Lima, Perú · gsrobles2705@gmail.com · +51 960 950 454
github.com/gsrobles2705

Profile

Software developer with a strong analytical foundation and a product-oriented mindset. I architect solutions that scale, combining clean code practices with systems thinking. My background spans from game development and desktop applications to Progressive Web Applications, always prioritizing performance, maintainability, and thoughtful user experiences.

Currently pursuing Industrial Engineering, I bring a unique interdisciplinary perspective that bridges software development with process optimization and operational efficiency.

Technical Skills

Languages

C++ · Python · HTML · CSS

Currently Learning

JavaScript · TypeScript · React · Firebase · Tailwind CSS · Git · GitHub

Core Competencies

Clean Architecture · Scalable Systems · PWA Development · Offline-First Design · Real-Time Applications · UI/UX Thinking · Algorithm Optimization

Featured Projects

FinTrack

Personal Finance PWA

- Offline-capable Progressive Web App for personal finance management
- Zero ads, no account required, privacy-first approach
- Features: daily budgets, savings goals, debt tracking, installable to home screen

- **Tech:** PWA, Service Workers, Local Storage

RepUs

Collaborative Workspace Platform

- Real-time collaborative spaces with role-based access control
- Integrated chat, file sharing, and threaded comments
- Instant synchronization powered by Firebase
- **Tech:** Firebase, Real-time Database, Authentication

Touchê

Business Landing & PWA

- Complete landing page and PWA developed for a tailoring business
- Google Login integration and Firebase backend
- Responsive design with Tailwind CSS
- **Tech:** Firebase, Tailwind CSS, OAuth

Arcade Games Collection

Classic Game Rebuilds

- Rebuilt Flappy Bird, Tetris, Pong, and Tic Tac Toe from scratch
- Currently undergoing complete architectural refactor for performance
- **Tech:** Canvas API, Game Loop Architecture

Random Generator

High-Performance Number Generator

- Capable of generating millions of random values using optimized C++ algorithms
- Focus on memory efficiency and execution speed
- **Tech:** C++, Algorithm Optimization

Journey

Year	Milestone
Early Start	Scratch — Visual programming fundamentals
Foundation	C++ — Algorithms and systems programming

Year	Milestone
Growth	Game Development — Interactive experiences from the ground up
Expansion	Desktop Applications — Native software with real-world utility
Modern Web	PWAs — Progressive Web Applications with offline capabilities
Community	Open Source — Preparing public releases with documentation
Present	Industrial Engineering — Systems optimization and process management
Future	Startup Founder — Building products that matter

Education

Industrial Engineering — In Progress
Focus on systems optimization, process management, and operational efficiency.

Open Source

Currently preparing the public release of personal projects with:

- Complete technical documentation
- Clean architecture and modular design
- Professional README files with screenshots
- Full development history and changelogs

Public repositories coming soon to github.com/gsrobles2705
